

### Data Center Migration

Overwhelmed by the thought of moving an already imbedded infrastructure to a new facility or to the cloud? Moving your data center is not a trivial and definitely not something that is well rehearsed by most organizations. Our data center migration services provide clients with the benefit and wisdom of over 1000 data center migrations. We help clients navigate around the potentially service-affecting obstacles and pitfalls associated with local, continental, and international data center migrations.

#### Data Center Migration Services include:

- Comprehensive current hardware and software inventory
- Detailed mapping of system and application interdependencies
- Flexible migration strategies based on risk and downtime tolerance
- Short term equipment leases for temporary infrastructure
- Warranty compliance through hardware recertification
- Comprehensive transit insurance against theft, damage, or loss
- Auditable chain of custody

#### World Class Data Center Migration Services

Our team has migrated more than three million square feet of mission-critical data center space and over 500,000 data center devices. With more than 350 individual data center migrations performed over the past 5 years, few organizations have more experience migrating mission critical infrastructure to and from traditional data center environments or to the cloud. Our experienced professionals have successfully migrated more than 50 traditional data centers to the cloud, continuing to amass the knowledge and capabilities to transition any company from a traditional environment to a hybrid or dedicated, private cloud solution.

#### An Application-Centric Approach

The lack of visibility into the interdependencies of a company's data and application environment can wreak havoc on any data center migration plan. With projects and priorities taxing already lean and burdened IT departments, the time and energy to identify, source and qualify the variety of skills needed to orchestrate a successful migration is daunting. CIL Professional Services leverages a combination of automated discovery, observation, and human interaction to provide the most comprehensive view possible of your organization's data, application, and infrastructure dependencies. This results in a migration strategy that is as unique as your business, and keeps your business running during the migration process.

Our methodology provides 100% auditability of every internal and external resource that handles a client asset - chain of custody. It is this in-depth capability that has enabled our team to successfully migrate over \$3.7 billion in assets - casualty free.

Your business can't afford to be held back in a less than optimal IT environment. Cyber Innovation Labs Professional Services can help you identify your business' needs today and help plan a solution that is flexible enough to meet your needs tomorrow. CIL will plan and execute each and every step along the way to ensure optimal business continuity, business vibrancy, and business capabilities throughout the entire migration process.

**A Comprehensive Suite of Services**

Whether your organization is in the beginning stages of developing a standardized and optimized data center strategy - or looking for ways to reduce costs and maximize the performance and service quality of your IT investment, leveraging FLEXServices will reduce common risks and complexities.

**Best-of-Breed Consultative, Professional, and Managed Services**

CIL Professional Services employs a simple, time tested framework of services designed to guide your organization through each step of IT Transformation. The framework is truly flexible; whether your needs are for individual assessments, implementation services or a comprehensive, full lifecycle IT Transformation Program, CIL Professional Services has the consultants, processes, and project management framework to ensure that your IT strategy enables your business to thrive.

**Creating Actionable Roadmaps for Transformation**

Business and Technology Assessments are crucial to understanding the current state of your technology, the capabilities of your staff and the processes used by your organization. Often times a fresh set of eyes is needed to distinguish between your current state and whether to develop a future vision of an optimized IT organization. Rather than producing binders of boilerplate reports and suggestions, CIL Professional Services will lay out the dependencies, risk mitigation strategies, and quantify the immediate and long term advantages of implementing innovative technology and business solutions.

**A Disciplined Approach to the Design Process**

CIL Professional Services employs some of the

industry's most experienced IT and Process Architects. Our Design services are centered on highly disciplined engineering processes. Through our meticulous approach to requirements definition combined with an iterative and collaborative design process, our clients benefit from knowing that its systems and processes are purpose-built to suit their unique needs.

**Risk Mitigated, Success-Driven Transformation**

The implementation of new technologies, facilities, or processes can be a complex endeavor. In most cases, these changes must be implemented alongside existing systems and technologies that power your business. Cutting systems over from the old to the new is not an exercise for the faint of heart nor is it an example of a good place to learn on the job. CIL Professional Services helps clients implement new technologies, processes, and facilities by bringing highly experienced, certified professionals that specialize in mission critical environments. This minimizes risk and enables our clients to benefit from true IT Transformation.
